

SUPROTEC

Regular 100

Lubricating Composition "SUPROTEC - Regular 100"

The area of usage

It is intended for treatment internal combustion engines of any type, with a working engine volume up to 2,5 l.

Application steps:

It is recommended to apply at every- or every other time of oil replacement.

1. Before priming mix (shake) the bottle carefully until all of a deposit is dissolved.
2. Warm up the engine on new oil to a working temperature.
3. Pour LC into oil priming mouth.
4. Start the engine and maintain further in a regular mode for no less than 15-30 minutes.

The note: LC "Suprotec" is compatible with any type of engine oils. For the engines have been treated with LC Suprotec "UNIVERSAL" or LC Suprotec "LUX" it is recommended to apply LC "SUPROTEC - Regular 100" for the preventive purposes once every 30 000 km of run after treatment
